Product Information

The AXC7585 1600A High Current Source and Measurement Unit family was designed for semiconductor and high throughput testing.

Very fast linear output stage

The very fast rise time allows current pulses up to 1600A with a programmable pulse length.

The pulse duration can be configured from 300 μ s to 1 ms at maximum current. An integrated "Ixt limiter" monitors the maximum current-time product of 1600Ax1ms. This allows a multitude of current-pulse-length combinations.

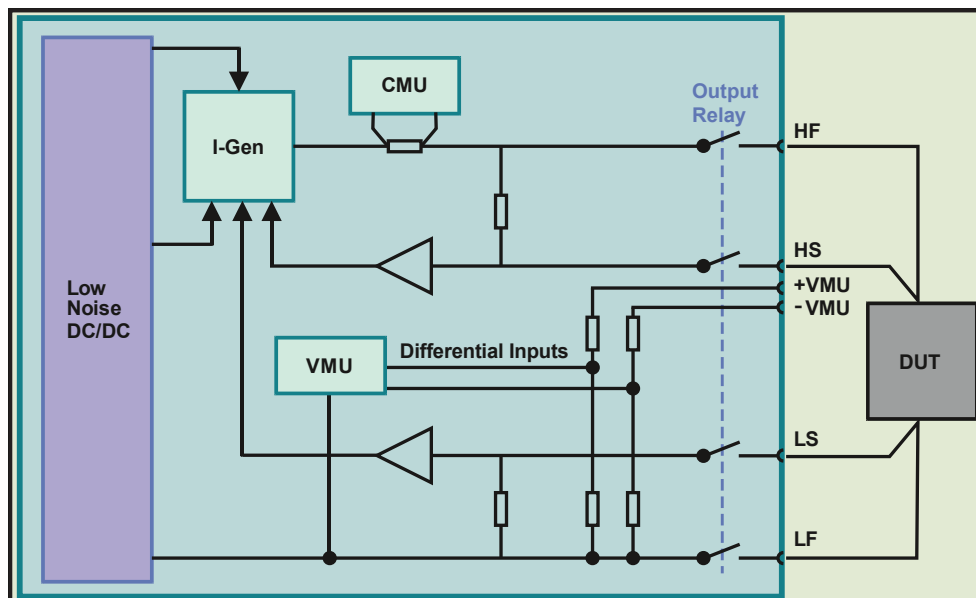

Integrated measurement units...

Due to the integrated differential voltage measurement unit (VMU) and the integrated current measurement unit (CMU) all high current tests of power semiconductor can be done.

An optional isolated VMU is available on request. This VMU will have an additional measurement range and a much higher CMRR.

Multiple interfaces included

Interfaces for LAN, GPIB and USB are included to offer an easy communication with most usual control devices.
